※1 : When the 3.5mm plug is connected to focus/iris terminal on Panasonic cameras, only the remote control manual mode is available, regardless of the camera's auto/manual mode.

※2 : As for some of the Panasonic cameras released after August 2009, connecting the 3.5mm plug to focus/iris terminal makes the function fixed to auto iris mode, and disables the manual mode.

※3 : Tested by the standard kit lens.

※4 : Operable by micro four thirds lenses.

※5 : Additional A-3AV conversion cable is needed for the AV REMOTE Terminal.

※6 : Only optional zoom lens E PZ 18-200mm F3.5-6.3 OSS : SELP18200 is good with latest firmware.(As of May 2013)

※7 : The "On" button on the remote does not work when the camera is off.
